Belgium

Permissions

1. Go to **system** → **Permissions** → **User Roles**.
2. Select the user role you want to grant permission.
3. Go to the tab “Role Resources”.
4. Select **CompactCode** → **Category Product Slider** → **Configuration**.
5. When this is selected, save the role.

Warning: By default, new modules grant access to every user role, even when they are not selected.

To deny permissions, just follow step 1-5. Deselect the mentioned resources and save the role.

Insert Category Product Slider

Navigate to Pages

1. To insert the Category Product Slider on a page, navigate to the Magento® backend and click “content”.
2. Next, click “pages” under the “elements” title.
3. Once you found the page you want to insert the widget in, click the arrow icon right of select and choose edit.

Insert widget and configuration

1. In the content tab, click the “insert widget” button.
2. **Widget type:** select the “Compactcode Category Product Slider”.
3. **Enable:** choose whether or not you want the widget enabled.
4. **Title:** the title that appears on top of the slider.
5. **Max number:** the maximum number of slides in your slider.
6. **Max number/page:** the maximum number of items per page or slide, when this max is reached you will get a slider to navigate to the other product items.
7. **Use subcategories products:** if enabled, the product slider will also display product subcategories.
8. **Template:** choose the template you wish to use. “category slider” shows all your products (until the max number is reached). “New product slider” will only display products that are set as new product in their settings.
9. **Select category:** select all the categories/subcategories you want shown on your page. Simply click on a product in the “selectable categories” list to add them. To deselect a product click on it in the selected categories list.
