Hellegatstraat 5
2590 Berlaar
Belgium

Permissions

1. Go to **system** → **Permissions** → **User Roles**.
2. Select the user role you want to grant permission.
3. Go to the tab “Role Resources”.
4. Select **CompactCode** → **Google Translate Product** → **Configuration**.
5. When this is selected, save the role.

Warning: By default, new modules grant access to every user role, even when they are not selected.

To deny permissions, just follow step 1-5. Deselect the mentioned resources and save the role.

Settings

Navigate to settings

1. After logging in to the Magento® backend click the CompactCode icon.
2. Click configuration under the “Google Translate Product” title.

General settings

1. Fill in your personal Google API Key.

Translation workflow

Single product

1. Select a product you want to translate and click edit in the action column.
2. Click the translate button on the top left of the product page.
3. You see the product SKU, description and short description. You can't edit them here. You have to do this on the product page.
4. Select the store view where the translation will be saved.
5. Select the current language of the description and short description.
6. Select the language you want to translate to.
7. Select if you want to translate the description, short description or both.
8. Finally, click save.

Multiple products

1. Select the products you want to translate in the products list.
2. Select translate in the actions dropdown list.
3. Click OK in the popup if you want to translate the selected items.
4. Select the store view where the translations will be saved.
5. Select the current language of the description and short description.
6. Select the language you want to translate to.
7. Select if you want to translate the description, short description or both.
8. Finally, click save.

Error logs

1. You will see a table with all your products that aren't saved. You can see the product id, product SKU and the error message why the product short description or description did not translate.
2. You can click on the CSV file button. This will download the table in a CSV file.
3. If you open the file. You will see the same table as in your browser.
