Belgium

Permissions

1. Go to **system → Permissions → User Roles**.
2. Select the user role you want to grant permission.
3. Go to the tab "Role Resources"
4. Select **CompactCode → Store and Currency Changer → Configuration**.
5. When this is selected, save the role

Warning: By default, new modules grant access to every user role, even when they are not selected.

To deny permissions, just follow step 1-4. Deselect the mentioned resources and save the role.

Settings

Navigate to settings

1. After logging in to the Magento® backend click the CompactCode icon.
2. Click configuration under the "Store and Currency Changer" title.

General settings

1. **Enable:** enable or disable the Store and Currency Changer module.
2. **Is premium:** enable SSL connection. If you have a premium account, you can enable this setting so you can create a SSL connection.
3. **API key:** you can find your API key in the dashboard of your Ipstack account.
4. **Browser language Enable:** enable or disable the redirection based on the browser language.
5. **IP location Enable:** enable or disable the redirection based on IP address.
6. **Browser IP location:** if setting 4 and 5 are enabled, you can choose on which action you want to redirect the customers.
7. **Region Exceptions:** you can add exceptions for regions, if you want that a specific region redirects to a specific store view. This uses ISO3166-2 for the region. You can find a list of region code on: [Wikipedia](#).
8. **Currency Enable:** enable or disable the currency changer. For this functionality you need a premium Ipstack account.

Store view related settings

1. **Countries Enable:** enable or disable countries in the storeview.
2. **Countries select:** if you have enable the previous setting, you can select the countries you want to redirect unregarded their ip or browser language.

Presets

n °	Group id	Label	Preset	Explanation
1	General	Enable	0	Enable or Disable the module.
2		Is Premium	0	When you are a Premium user of Ipstack you gain access to the https enviroment. Enabling this will make all the calls over https instead of http
3		Browser Language: Enable	0	Fill in your API key here from your Ipstack account.
4		IP Location: Enable	0	If you enable this the user will be directed to the store with his IP Location Language.
5		Countries: Enable	0	If you enable this, the module will first check if a country is matched with this store and redirect the customer to this store
6		Currency: Enable	0	Only works with premium because of Ipstack. More information on ipstack . If you enable this the module will check if the location has a certain currency and if your website has that currency configured. If it finds a match the currency will be set to that currency.
